

Asset Planner for the Arts provides access to asset management software that allows arts organizations to track the condition of their arts facility

ArtsBuild has partnered with Ameresco to provide organizations with this remarkable cloud-based system. Engineering firm Walter Fedy will be leading the in-facility assessments, resulting in a complete inventory of your arts facility and its fixed components.

With Asset Planner, you can...

Track the physical condition of your facilities

Calculate the costs for the replacement of key building components

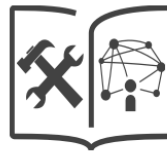

Provide a detailed 30-year capital forecast, with a focus on the next five years

The tool comes with built in cost-modeling that allows you to do strategic, long term planning for your facility. This will help you reduce financial risk by indicating which upgrades should be prioritized above others.

What is Included?

Site walk-through and building inventory by Walter Fedy

Two year operating license*

Online training (via webinar) on the Asset Planner software with Ameresco and ongoing support for two years

Access to the ArtsBuild Ontario Learning Series

Cost

Cost for this program is based on square footage of the facility, facility type and location (due to travel cost). The Ontario Trillium Foundation has provided funds to reduce these costs to make it more affordable to our arts organizations.
